

GeoPro Desludging Tubes

Solids Dewatering

Innovative Environmental Solutions

GeoPro Tubes provide an excellent solution to high water content wastewater sludges that can be a major headache to industry. GeoPro Tubes, made with strong woven textile fabrics are ideal for reducing these problems using low energy technology. Slurry is pumped into the tubes and fine particles are retained in the tube while clear filtrate is released through the porous fabric. With the appropriate polymer added, the process is very efficient and good, compact, dry solids are quickly achieved.

When the tubes are dry, they are cut open and the contents can be used for composting or otherwise disposed of.

GeoPro Tubes are a simple, cost-effective and proven solution. Contact us for advice on how best to successfully use tubes on your project.

Typical Applications

WWTP Sludges * Contaminated Sediments * Winery Lees * Dairy Wastes * Abattoir Slurry * MBOs * Paper Pulp Sludges * Mining Industry Wastes * Waterways
