

Pond Surveys

The First Step to Healthy Waterways

Innovative Environmental Solutions

Apex Envirocare now offers detailed pond surveys which allow stakeholders to better monitor and evaluate their waterways and make informed decisions on how best to manage them.

We survey the waterway using GPS software in conjunction with our Sludge Determinator to plot contours for water depth and sediment thickness as well as the waterway perimeter. The software then calculates the volume of water and sediment.

In addition water and sediment samples can be taken and sent to a NATA approved laboratory for analysis.

With the above information, a detailed database of the waterway can be established, allowing management to decide on the best form of maintenance. This may include sediment removal, use of aerators/fountains or algal control.
