

# GeoPro Microdredge Sediment Removal System

Innovative Environmental Solutions

Trailer Launch

Crane Launch

The GeoPro Microdredger, in combination with our GeoPro Desludging Tubes, removes accumulated sediment from water bodies such as municipal ponds, detention basins and artificial wetlands. Removal of the sediments in this very controlled manner increases capacity and returns the water body to its original function and condition.

Apex Envirocare are experienced in removing many types of sediments, including contaminated sludges and acid sulphate sediments. Our methods cause little disturbance to the surrounding area and have been approved by regulatory bodies as being environmentally sensitive to both flora and fauna.

## Typical Applications: -

**Waste Water Treatment Lagoons \* Detention Basins \* Ornamental Lakes \* Run-off Ponds**
